About Me

I am a Games Programmer currently in my second year of study at Staffordshire University, I am looking to do a placement year across 2027-2028, I am deeply interested in graphics programming and AI specifically regarding path finding.

Skills & Qualities

Proficient C++	Quick Independent learner	Proficient in HTML & CSS
C#	Leadership from volunteering	Experience in Zendesk
Adept Python	Proficient in all OS	Adept at Sage 200
ISO/IEC 2700		

Work Experience

R&J Yorkshires Finest | Financial Assistant | March 2025 – August 2025 (Gap Year)

There were two sides to my role: customer facing and financial. For the customer facing side I took calls which ranged from chefs placing orders for their restaurants which we supplied across Yorkshire, to helping them find the right products and personalising certain products until the chefs received exactly what they required. I then used our in-house software to place the orders and communicate to the factory any special requirements.

For the financial side of my role, I managed invoice matching the products we purchased including requesting any credit notes from suppliers. Alongside this, I processed the weekly direct debits and card payments for our customers, keeping track of payments.

During my time I also pioneered new systems and processes for mine and other roles to create an easier, more seamless system for the whole company, one of which led to fewer missed credit notes and an easier transfer of information between colleagues.

Voucher Express | Temporary Corporate Sales Associate | October 2024 – December 2024

Managing multiple tasks, my main duty was to liaise with corporate clients using Zendesk to ascertain the products that best fit them, promoting our in-house product, while streamlining the process by gathering previous purchasing information to make it a stress-free seamless experience for the purchaser. Processing the orders using Sage 200, working to the ISO/IEC 27001 accreditation. Alongside this I reach out to consumer clients on behalf of IKEA to retrieve further information to supply compensation.

Goonhilly Earth Station | Intern | July 2023

I spent a week learning the process the earth station uses to track satellites and communicate with them, such as methods of locating satellites, the equations used and databases in place. We did this all while building a presentation on Atmospheric rubbish which we presented to the CEO at the end.

Education

Staffordshire University | Games Programming BSc (Hons) | September 2025 – Present

I am currently studying my second year at Staffordshire University and I'm hoping to proceed with a placement year to achieve my degree in 2029.

St. Aidan's & St. John Fisher Associated Sixth Form | A-Level | September 2022 – Jun 2024

Physics – E

Mathematics – D

Computer Science - C Created a maze generation and solving app using pygame, that uses multiple algorithms to display the process each uses.

Ripon Grammar School | GCSE | September 2020 – June 2022

Physics (Higher) - 8

Mathematics (Higher) - 7

Chemistry (Higher) – 6

English Language – 5

Biology (Higher) - 6

Astronomy - 5
